

U.P. HIGHER EDUCATION SERVICES COMMISSION, ALLAHABAD

ZOOLOGY (Subject Code-72)

UNIT-1: Molecules and their interaction relevant to Biology :

- A. Structure of atoms, molecules and chemical bonds.
- B. Composition, structure and function of biomolecules (carbohydrates, lipids, proteins, nucleic acids and vitamins).
- C. Principles of biophysical chemistry (pH, buffer, reaction kinetics, thermodynamics, colligative properties).
- D. Bioenergetics, glycolysis, oxidative phosphorylation, coupled reaction, group transfer, biological energy transducers.
- E. Principles of catalysis, enzymes and enzyme kinetics, enzyme regulation, mechanism of enzyme catalysis, isozymes
- F. Conformation of proteins (Ramachandran plot, secondary, tertiary and quaternary structure; domains; motif and folds).
- G. Conformation of nucleic acids (A-,B-,Z-, DNA), t-RNA, micro-RNA).
- H. Metabolism of carbohydrates, lipids, amino acids nucleotides and vitamins.

UNIT-2: Cellular Organization :

- A. **Membrane structure and function :** Structure of model membrane, lipid bilayer and membrane protein diffusion, osmosis, ion channels, active transport, ion pumps, mechanism of sorting and regulation of intracellular transport, electrical properties of membranes.
- B. **Structural organization and function of intracellular organelles :** Cell wall, nucleus, mitochondria, Golgi bodies, lysosomes, endoplasmic reticulum, peroxisomes, plastids, vacuoles, chloroplast, structure & function of cytoskeleton and its role in motility.
- C. **Organization of genes and chromosomes :** Operon, interrupted genes, gene families, structure of chromatin and chromosomes, unique and repetitive DNA, heterochromatin, euchromatin, transposons.
- D. **Cell division and cell cycle :** Mitosis and meiosis, their regulation, steps in cell cycle, and control of cell cycle.

UNIT-3: Fundamental Processes :

- A. **DNA replication, repair and recombination :** Unit of replication, enzymes involved, replication origin and replication fork, fidelity of replication, extrachromosomal replicons, DNA damage and repair mechanisms.
- B. **RNA synthesis and processing :** Transcription factors and machinery, formation of initiation complex, transcription activator and repressor, RNA polymerases, capping, elongation, and termination, RNA processing, RNA editing, splicing, polyadenylation, structure and function of different types of RNA, RNA transport.
- C. **Protein synthesis and processing :** Ribosome, formation of initiation complex, initiation factors and their regulation, elongation and elongation factors, termination, genetic code, aminoacylation of tRNA, tRNA-identity, aminoacyl tRNA synthetase, and translational proof-reading, translational inhibitors, Post-translational modification of proteins.

UNIT-4: Cell Communication and cell signaling :

- A. **Host parasite interaction** : Recognition and entry processes of different pathogens like bacteria, viruses into animal and plant host cells, alteration of host cell behavior by pathogens.
- B. **Cell Signaling** : Hormones and their receptors, cell surface receptor, signaling through G-protein coupled receptors, signal transduction pathways, second messengers.
- C. **Cellular Communication** : Regulation of hematopoiesis, general principles of cell communication, cell adhesion and roles of different adhesion molecules, gap junctions, extracellular matrix, integrins, neurotransmission and its regulation.
- D. **Cancer** : Genetic rearrangements in progenitor cells, oncogenes, tumor suppressor genes, cancer and the cell cycle, virus-induced cancer, metastasis, interaction of cancer cells with normal cells, apoptosis.
- E. **Innate and adaptive immune system** : Cells and molecules involved in innate and adaptive immunity, antigens, antigenicity and immunogenicity. B and T cell epitopes, structure and function of antibody molecules. generation of antibody diversity, monoclonal antibodies, antibody engineering, antigen-antibody diversity, monoclonal antibodies, antibody engineering, antigen-antibody interactions, MHC molecules, antigen processing and presentation, activation and differentiation of B and T cells, B and T cell receptors, humoral and cell-mediated immune responses, primary and secondary immune modulation, the complement system.

UNIT-5: Developmental Biology :

- A. **Basic concepts of development** : Potency, commitment, specification, induction, competence, determination and differentiation.
- B. **Gametogenesis, fertilization and early development**: Production of gametes, cell surface molecules in sperm-egg recognition in animals; embryo sac development and double fertilization in plants; zygote formation, cleavage, blastula formation, embryonic fields, gastrulation and formation of germ layers in animals; embryogenesis, establishment of symmetry in plants; seed formation and germination.
- C. **Morphogenesis and organogenesis in animals** : Cell aggregation and differentiation in *Dictyostelium*; axes and pattern formation in *Drosophila*, amphibia and chick; organogenesis -vulva formation in *Caenorhabditis elegans*, eye lens induction, limb development and regeneration in vertebrates; differentiation of neurons, post embryonic development- larval formation, metamorphosis; environmental regulation of normal development; sex determination.
- D. **Morphogenesis and organogenesis in plants** : Organization of shoot and root apical meristem; shoot and root development; leaf development and phyllotaxy; transition to flowering, floral meristems and floral development in *Arabidopsis* and *Antirrhinum*
- E. Programmed cell death, aging and senescence

UNIT-6: System Physiology-Animal :

- A. **Blood and circulation** : Blood corpuscles, haemopoiesis and formed elements, plasma function, blood volume, blood volume regulation, blood groups, haemoglobin, immunity, haemostasis.
- B. **Cardiovascular System** : Comparative anatomy of heart structure, myogenic heart, specialized tissue, ECG – its principle and significance, cardiac cycle, heart as a pump, blood pressure, neural and chemical regulation of all above.

- C. **Respiratory system** : Comparison of respiration in different species, anatomical considerations, transport of gases, exchange of gases, waste elimination, neural and chemical regulation of respiration.
- D. **Nervous system** : Neurons, action potential, gross neuroanatomy of the brain and spinal cord, central and peripheral nervous system, neural control of muscle tone and posture.
- E. **Sense organs** : Vision, hearing and tactile response.
- F. **Excretory system** : Comparative physiology of excretion, kidney, urine formation, urine concentration, waste elimination, micturition, regulation of water balance, blood volume, blood pressure, electrolyte balance, acid-base balance.
- G. **Thermoregulation** : Comfort zone, body temperature-physical, chemical, neural regulation, acclimatization.
- H. Stress and adaptation
- I. **Digestive system** : Digestion, absorption, energy balance, BMR.
- J. **Endocrinology and reproduction** : Endocrine glands, basic mechanism of hormone action, hormones and diseases; reproductive processes, neuroendocrine regulation.

UNIT-7: Inheritance Biology

- A. **Mendelian principles** : Dominance, segregation, independent assortment, deviation from Mendelian inheritance.
- B. **Concept of gene** : Allele, multiple alleles, pseudoallele, complementation tests.
- C. **Extensions of Mendelian principles** : Codominance, incomplete dominance, gene interactions, pleiotropy, genomic imprinting, penetrance and expressivity, phenocopy, linkage and crossing over, sex linkage, sex limited and sex influenced characters.
- D. **Gene mapping methods** : Linkage maps, tetrad analysis, mapping with molecular markers, mapping by using somatic cell hybrids, development of mapping population in plants.
- E. **Extra chromosomal inheritance** : Inheritance of Mitochondrial and chloroplast genes, maternal inheritance.
- F. Quantitative genetics
- G. **Mutation** : Types, causes and detection, mutant types-lethal, conditional, biochemical, loss of function, gain of function, germinal verses somatic mutants, insertional mutagenesis.
- H. **Structural and numerical alterations of chromosomes** : Deletion, duplication, inversion, translocation, ploidy and their genetic implications.
- I. **Recombination** : Homologous and non-homologous recombination, including transposition, site-specific.

UNIT-8: Diversity of life forms:

- A. **Principles & methods of taxonomy** : Concepts of species and hierarchical taxa, biological nomenclature, classical & quantitative methods of taxonomy of plants, animals and microorganisms.
- B. **Levels of structural organization**: Unicellular, colonial and multicellular forms; levels of organization of tissues, organs & systems.
- C. **Outline classification of plants, animals & microorganisms** : Important criteria used for classification in each taxon; classification of plants, animals and microorganisms; evolutionary relationships among taxa.
- D. **Organisms of health & agricultural importance** : Common parasites and pathogens of humans, domestic animals and crops.

Unit-9: Ecological Principles :

- A. **The Environment** : Physical environment; biotic environment; biotic and abiotic interactions.
- B. **Habitat and Niche** : Concept of habitat and niche; niche width and overlap; fundamental and realized niche; resource partitioning; character displacement.
- C. **Population Ecology** : Characteristics of a population; population growth curves; population regulation; life history strategies (*r* and *K* selection); concept of metapopulation- demes and dispersal, interdemec extinctions, age structured populations.
- D. **Species Interactions** : Types of interactions, interspecific competition, herbivory, carnivory, pollination, symbiosis.
- E. **Community Ecology** : Nature of communities; community structure and attributes; levels of species diversity and its measurement; edges and ecotones.
- F. **Ecological Succession** : Types; mechanisms; changes involved in succession; concept of climax.
- G. **Ecosystems** : Structure and functions; energy flow and mineral cycling (C,N,P); primary production and decomposition; structure and function of some Indian ecosystems: terrestrial (forest, grassland) and aquatic (fresh water, marine, eustarine).
- H. **Biogeography** : Major terrestrial biomes; theory of island biogeography; biogeographical zones of India.
- I. **Applied Ecology** : Environmental pollution; global environmental change; biodiversity- status, monitoring and documentation; major drivers of biodiversity change; biodiversity management approaches.
- J. **Conservation Biology** : Principles of conservation, major approaches to management, Indian case studies on conservation/management strategy (Project Tiger, Biosphere reserves).

UNIT-10: Evolution and behaviour :

- A. **Emergence of evolutionary thoughts** : Lamarck; Darwin—concepts of variation, adaptation, struggle, fitness and natural selection; Mendelism; Spontaneity of mutations; the evolutionary synthesis.
- B. **Origin of cells and unicellular evolution** : Origin of basic biological molecules; Abiotic synthesis of organic monomers and polymers; concept of Oparin and Haldane; Experiment of Miller (1953); The first cell; Evolution of prokaryotes; Origin of eukaryotic cells; Evolution of unicellular eukaryotes; Anaerobic metabolism, photosynthesis and aerobic metabolism.
- C. **Paleontology and Evolutionary History** : The evolutionary time scale; Eras, periods and epoch; Major events in the evolutionary time scale; Origins of unicellular and multi cellular organisms; Major groups of plants and animals; Stages in primate evolution including Homo.
- D. **Molecular Evolution** : Concepts of neutral evolution, molecular divergence and molecular clocks; Molecular tools in phylogeny, classification and identification; Protein and nucleotide sequence analysis; origin of new genes and proteins; Gene duplication and divergence.
- E. **The Mechanisms** : Population genetics-Populations, Gene pool, Gene frequency; Hardy-Weinberg Law; concepts and rate of change in gene frequency through natural selection, migration and random genetic drift; Adaptive radiation and modifications; Isolating mechanisms; Speciation; Allopatricity and Sympatricity; Convergent evolution; Sexual selection; Co-evolution.
- F. **Brain, Behavior and Evolution** : Approaches and methods in study of behavior; Proximate and ultimate causation; Altruism and evolution-Group selection, Kin selection, Reciprocal altruism; Neural basis of learning, memory, cognition, sleep

and arousal; Biological clocks; Development of behavior; Social communication; Social dominance; Use of space and territoriality; Mating systems, Parental investment and Reproductive success; Parental care; Aggressive behavior; Habitat selection and optimality in foraging; Migration, orientation and navigation; Domestication and behavioral changes.

UNIT-11: Applied Biology:

- A. Application of immunological principles (vaccines, diagnostics). Tissue and cell culture methods for plants and animals.
- B. Transgenic animals and plants, molecular approaches to diagnosis and strain identification.
- C. Genomics and its application to health and agriculture, including gene therapy.
- D. Bioresource and uses of biodiversity.
- E. Bioremediation and phytoremediation
- F. Biosensors.

UNIT-12: Methods in Biology :

- A. **Molecular Biology and Recombinant DNA methods :** Isolation and purification of RNA, DNA (genomic and plasmid) and proteins, different separation methods; Analysis of RNA, DNA and proteins by one and two dimensional gel electrophoresis.
Generation of genomic and cDNA libraries in plasmid, phage, cosmid, BAC and YAC vectors; In vitro mutagenesis and deletion techniques, gene knock out in bacterial and eukaryotic organisms; Protein sequencing methods, detection of post-translation modification of proteins; DNA sequencing methods.
- B. **Histochemical and Immunotechniques :** Antibody generation, Detection of molecules using ELISA, RIA, western blot, immunoprecipitation, fluocytometry and immunofluorescence microscopy.
- C. **Biophysical Method :** analysis of biomolecules using UV/visible, fluorescence, circular dichroism, NMR and ESR spectroscopy, structure determination using x-ray diffraction and NMR; analysis using light scattering, different types of mass spectrometry and surface plasma resonance methods.
- D. **Statistical Methods :** Measures of central tendency and dispersal; probability distributions (Binomial, Poisson and normal); Sampling distribution; Difference between parametric and non-parametric statistics; Confidence Interval; Errors; Levels of significance; Regression and Correlation; t-test; Analysis of variance; X^2 test; Basic introduction to Muetrovariate statistics, etc.
- E. **Radiolabeling techniques :** Properties of different types of radioisotopes normally used in biology, their detection and measurement; incorporation of radioisotopes in biological tissues and cells, molecular imaging of radioactive material, safety guidelines.
- F. **Microscopic techniques :** Visualization of cells and subcellular components by light microscopy, resolving powers of different microscopes, microscopy of living cells, scanning and transmission microscopes, different fixation and staining techniques for EM, freeze-etch and freeze- fracture methods for EM, image processing methods in microscopy.
- G. **Methods in field biology :** Methods of estimating population density of animals and plants, ranging patterns through direct, indirect and remote observations, sampling methods in the study of behavior, habitat characterization- ground and remote sensing methods.
- I. **Computational methods :** Nucleic acid and protein sequence databases; data mining methods for sequence analysis, web-based tools for sequence searches, motif analysis and presentation.
